

7-HYDROXYMITRAGYNINE (7-OH) PRODUCTS FOUND IN SCHOOLS

School Resource Officer Rapid Visual Guide

What These Products Are

7-OH is a potent kratom alkaloid sold as tablets, pills, gummies, and liquid shots. Packaging often resembles candy, supplements, or energy products, making concealment easy.

Why SROs Should Be Alert

- Acts like a full opioid
- High overdose and respiratory depression risk
- Sold in gas stations and vape shops—often illegally under state FD&C; laws
- Marketed as “plant-based focus” or “energy” tablets
- Frequently mislabeled or inaccurately dosed
- Found in backpacks, bathrooms, and student vehicles

SRO Response Guidance

- Treat all 7-OH products as high-risk
- Confiscate and notify administration
- Photograph packaging and document statements
- Call EMS for slowed breathing, lethargy, vomiting, or collapse
- Activate mass-exposure protocol if multiple students are involved
